USER’S INSTRUCTION MANUAL
(Model SW592216 & SW592818)

OPENING THE DOOR

(There are (2) sets of user codes for this lock, each user code has the same function and equal authority)

1) Enter a valid user code, then press # button
   - When the correct code is entered, the lock will beep twice and a green LED light turns on
   - When the wrong code is entered, the lock will keep beeping and a yellow LED light flashes
2) Turn the handle and pull the door open

WRONG TRY PENALTY— Entry of four (3) consecutive wrong codes will start a 15 minute lock out. (During lock out, keypad will not respond to any operation.)

CHANGING THE 1ST USER CODE (This operation must always be performed with the door open)

1) Press the red “reset” button, the lock will beep twice and the yellow LED light will turn on. (The “reset” button is located on the side frame (hinge side) of the door.)
2) Enter your new user code (1-8) digits, then press the * button.
3) Test the operation of the lock several times before closing the door.

CHANGING THE 2ND USER CODE (This operation must always be performed with the door open)

1) Enter “00” on the keypad, and press the red “reset” button.
   The lock will beep twice and the yellow LED light turns on.
2) Enter your new user code (1-8) digits, then press * button.
3) Test the operation of the lock several times before closing the door.

CHANGING THE BATTERY

1) The red LED light indicates low battery
2) Remove the battery cover under the keypad housing.
3) Replace the battery. (Please use 9 volt alkaline battery)

EMERGENCY BYPASS KEY

When you lost your code or the lock has malfunctioned, you may use the mechanical bypass key to open the safe as follows. (If you think is malfunctioning, please attempt to change the battery first).

Please remove the sticker on the keypad to locate a screw. Removal of this screw this will allow you to disconnect the keypad from the plastic housing.

1) For some models, you can see the key hole on the right side inside the plastic case. Input the key into the key hole and turn both the key and the safe handle and the door will open. After the door is opened, please reset the code if necessary and remove the key.
2) For some models, you will be unable to see a keyhole, so you will be required to remove (2) additional screws that hold the plastic housing to the safe. Once the plastic housing is removed you will be able to see the key hole.

WARNING: DO NOT STORE THE EMERGENCY BYPASS KEY INSIDE THE SAFE. IT WILL NEED TO BE STORED IN ANOTHER SECURE PLACE.
